The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-16 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. The base claims call for a drainage path (16) which is not depicted in the drawings and as such it cannot be ascertained how drainage occurs, particularly how the channel (8) communicates with the path (16). In claim 2, line 2, where is the support for "threaded features"?

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 2 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 2, line 2 there is no antecedent basis for "the face plate," the same applies to "the multiple drainage paths" of line 3.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-2, 6, 7, and 16 rejected under 35 U.S.C. 103(a) as being unpatentable over Quirk taken with Tobias et al.

Quirk teaches, a drainage path at 38, best shown in Fig. 3. Tobias et al teach jet body drain channels 82 of Fig. 2. To provide for the former to employ the drain features of the latter or vice versa would have been obvious to the ordinary artisan as same are shown in identical art devices for the same purposes. The number of drain paths would have constituted an obvious extension of the teachings here. Re: claims 6-7, the eyeball nozzle is taught in both of the applied references. Claim 16 is rejected as claim 1 supra.

Claims 3-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over the art as applied to claim 1 above, and further in view of Walsh et al.

To further provide for the slanted wall nature of the air and water inlet pipes such as taught by Walsh et al in Fig 4 would have been obvious to the ordinary artisan as same is taught in an identical art device.

Claims 8-15 would be allowable in independent form with the 112 issues supra resolved.

Johnson shows another jet arrangement.

Any inquiry concerning this communication should be directed to Charles Phillips at telephone number (571) 272-4893.
